DETAILED ACTION

1. This communication is in response to applicant's 09/13/2000 in the application of Tamura for a "Cell search method in CDMA capable of carrying out a cell search processing at a high speed".

Election/Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 drawn to the method for a communication over free space. Subject matter wherein multiplex communication signals are transmitted over a medium which is not a wire or a waveguide. Combining or distributing information via code word channels using multiple access techniques (e.g., CDMA): This subclass is indented under subclass 310. Subject matter wherein spread spectrum coding techniques allow multiple signals occupying the same channel bandwidth to be transmitted simultaneously without interfering with one another, classified in **class 370, subclass 342.**

Art Unit: 2665

- II. Claims 13-18 drawn to the Combining or distributing information via code word channels using multiple access techniques (e.g., CDMA): This subclass is indented under subclass 329. Subject matter having details of a process or apparatus for allocating a communication channel to a user or subscriber for transmission of information. Subject matter wherein spread spectrum codes are allocated to allow multiple signals occupying the same channel bandwidth to be transmitted simultaneously without interfering with one another, classified in **class 370, subclass 335.**
3. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II which has separate utility such as having details for a process or apparatus for allocating a communication channel to a user or subscriber for transmission of information, which does not include the particular listed of the invention I, such as details of methods or apparatus for a combining or distributing information via code word channels using multiple access techniques. See MPEP § 806.05(d).

Art Unit: 2665

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37.CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
